Monthly Weather Report

January

Published by authority of the Government of India

ATMOSPHERIC SCIENCES
LIBRARY

MAR 1 1967

E. S. S. A.
U. S. Dept. of Commerce

Chief features—

- (i) Passage of two active western disturbances which gave abundant rainfall over the northern and the central parts of the country and
- (ii) Movement of a depression across the extreme south Peninsula resulting in a short spell of heavy rainfall in the Madras State in the second week of January.

Five western disturbances affected the weather over north India during this month. Of these, the first and the last disturbances were particularly active and caused extensive precipitation over north India and the central parts of the country. In fact, the last western disturbance of the month attained the intensity of a depression while it lay over the Punjabs on 30th January and caused fairly widespread rain or snow in the Western Himalayas and also fairly widespread showers with a few heavy falls in the adjoining plains. The movement and activity of each of the western disturbances is given in the following tabular statement.

Statement showing the movement and activity of western disturbances during January 1961

| S. No. | Period | Course | Region affected | Nature of precipitation | Period | Remarks |
|--------|-----------------------------------|---|---|--|--|---|
| 1 | 29th Dec. 1960— 5th Jan. 1961. | South Baluchistan-Sind-Punjab (P)-Punjab (I)-Western Himalayas Nepal Himalayas-Eastern Himalayas. | Rajasthan Punjab-Kumaon hills Himachal Pradesh | Scattered showers Fairly widespread or local rain/snow. | 29th Dec. 1960— 3rd Jan. 1961. 30th Dec. 1960— 3rd Jan. 1961. | QC 990 |
| | | Jammu and Kashmir Plains of Punjab(I) and of west Uttar Pradesh. | Jammu and Kashmir Plains of Punjab(I) and of west Uttar Pradesh. | Local or scattered rain/snow Local or scattered rain | 30th Dec. 1960— 3rd Jan. 1961. 31st Dec. 1960— 3rd Jan. 1961. | I39 I52 |
| | | East Uttar Pradesh, Madhya Pradesh, Orrisa Bihar State and West Bengal. | East Uttar Pradesh, Madhya Pradesh, Orrisa Bihar State and West Bengal. | Local or scattered rain. | 1st-4th Jan. | 1961 |
| | | Assam | Assam | Local or scattered rain. | 2nd-5th Jan. | |
| 2 | 9th—13th | Northern divisions of West Pakistan-Punjab (I)-Jammu and Kashmir-Western Himalayas-Nepal Himalayas-Eastern Himalayas. | Jammu and Kashmir Punjab hills Northeast Assam | Scattered rain/snow. Scattered rain/snow. Isolated light or very light showers. | 11th 12th 13th | |
| 3 | 16th—18th | Baluchistan-Sind-Punjab (P)-Punjab (I)-Jammu and Kashmir. | North Rajasthan Punjab-Kumaon hills Jammu and Kashmir | Isolated light to very light showers | 18th | |
| 4 | 23rd—27th | Baluchistan-Sind-Punjab (P)-Punjab (I)-Jammu and Kashmir. | Punjab (I) Himachal Pradesh Jammu and Kashmir | Scattered showers Local rain Local or scattered rain/snow | 26th-27th 26th 25th—27th | Isolated snowfalls in the hills on 27th |
| 5 | 27th January— 3rd February | Baluchistan-Punjab (P)-Punjab (I)-Jammu and Kashmir-Western Himalayas-Nepal Himalayas-Eastern Himalayas | Rajasthan Jammu and Kashmir Himachal Pradesh-Punjab-Kumaon hills Punjab Plains | Scattered showers. Fairly widespread or local rain/snow. Fairly widespread showers | 29th-30th 29th January- 1st Feb. 30th Jan. | (i) It intensified into a depression with centre near Lyallpur on 30th morning. |

Statement showing the movement and activity of western disturbances during January 1961—Contd.

| S. No. | Period | Course | Region affected | Nature of precipitation | Period | Remarks |
|-----------|--------|--------|-------------------------|---|--|---|
| | | | Plains of Uttar Pradesh | Local or scattered showers Fairly widespread or local showers. | 29th Jan. and 1st Feb. 30th Jan. 1st Feb. | (i) Ambala reported 9 cm of rain, Mandi and Dharamsala 8 cm each and Chandigarh 7 cm on |
| | | | Madhya Pradesh | Local or scattered thunder-showers. | 30th Jan. 1st Feb. | 30th January. |
| | | | Northeast India | Fairly widespread thunder-showers Scattered thunder showers | 3rd Feb. 1st-2nd Feb. | (iii) A few hailstorms occurred in Madhya Pradesh. |

A trough of low pressure which lay off the Circars-north Coromandal coast on 31st December shifted a little northwards and filled up by 3rd January. Under its influence, a few showers occurred in the Madras State, coastal Andhra Pradesh and coastal Orissa between 1st and 3rd January.

In association with an easterly wave, a depression developed in the southwest Bay of Bengal with centre about 100 kms northeast of Trincomalee on the evening of 9th. It crossed the extreme south Peninsula, weakened into a low pressure area over the southeast Arabian Sea on 12th and then moved away westwards. Under its influence, rainfall was fairly widespread in the Madras State and occurred at a few places over the rest of the south Peninsula on 11th and 12th. Cuddalore and Palayamcottai each reported 13 cm of rain and Tuticorin 9 cm on 11th. Stormy weather occurred in the Seas near Tuticorin and this was responsible for the sinking of ten cargo boats near the Tuticorin port on the night of 10th-11th.

In association with another easterly wave, a low pressure area formed in the extreme southwest Bay of Bengal on 14th. It crossed south Ceylon and the neighbouring sea area and moved away westwards across the southeast Arabian Sea by 18th. In association with it, local or fairly widespread rain occurred in the Bay Islands from 12th to 14th and in the south Madras State from 15th to 17th. Adirampattinam reported 8 cm of rain on 16th. Very heavy rainfall was reported from Ceylon on 15th and according to press reports, nearly 4000 persons in Ceylon were marooned by the flood waters.

In the wake of the first western disturbance of the month, night temperatures generally fell below normal practically over the whole of north India by 6th January and remained so till about the 15th. They were appreciably below normal over Gujarat State, south Rajasthan and west Madhya Pradesh on a few days. Over the Peninsula, night temperatures remained generally above normal during the first half of the month. During the second half of the month, the temperatures over north India were above normal at many places, being appreciably so over Uttar Pradesh and north Madhya Pradesh toward the close of the month.

The rainfall during the month was in large excess in Orissa, Uttar Pradesh, the Punjab (I), east Rajasthan, west Madhya Pradesh, the Madras State and the Arabian Sea Islands, in moderate excess in the Bay Islands, in slight excess in west Rajasthan and east Madhya Pradesh and normal in Gangetic West Bengal; Jammu & Kashmir and Kerala. It was in slight defect in Bihar Plains, in moderate defect in Assam, Sub-Himalayan west Bengal, Bihar Plateau, coastal Andhra Pradesh and south Interior Mysore and in large defect in Saurashtra and Kutch, Madhya Maharashtra, Vidarbha and Telangana. There was no rain over the rest of the country outside Himachal Pradesh.

The mean maximum temperature was above normal in Assam, Bihar Plateau, the Konkan, Marathwada, Vidarbha and coastal Mysore and normal over the rest of the country outside Himachal Pradesh. The mean minimum temperature was normal in Orissa, Bihar Plateau, Jammu and Kashmir, east Rajasthan, west Madhya Pradesh, Gujarat State, the Konkan, Madhya Maharashtra, the Mysore State, Kerala and the Arabian Sea Islands and above normal over the rest of the country outside Himachal Pradesh.

The mean relative humidity in the morning was above normal in west Uttar Pradesh, the Punjab (I), Rajasthan and south Interior Mysore, below normal in Assam, Gujarat Region and the Konkan and normal over the rest of the country outside Himachal Pradesh.

The mean cloud amount in the morning was below normal in Assam, normal in West Bengal, Bihar State, west Uttar Pradesh, Jammu and Kashmir, west Rajasthan, Saurashtra and Kutch, the Konkan, Marathwada and Vidarbha and normal over the rest of the country outside Himachal, Pradesh.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and 31 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. IST of the date noted in the succeeding column. Similarly the heaviest fall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. IST of the date given in the succeeding column.

POONA 5,

The 31st March, 1961.

R. ANANTHAKRISHNAN,

for *Director General of Observatories.*

MONTHLY MEANS OF UPPER WINDS

January 1961 (Pausa 11—Magha 11, 1882 Saka)

During the month, observations of velocity and direction of upper winds were made at 53 stations in India. Out of these, at 41 stations all the observations were taken by means of pilot balloons and at 12 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. Particulars of the stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data up to 9.0 km. a.m.s.l. are given under Table IV and data above 9.0 km. a.m.s.l. under Table V.

In Tables IV and V :

n—represents the number of observations;

V—represents the mean wind speed in metres per second irrespective of direction;

v—represents the resultant mean velocity in metres per second;

D—represents the direction of the resultant mean wind in degrees East of North.

Mean and resultant winds are given in this publication for the following heights :

Surface, 0.15 km.a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0 and 36.0 km. a.m.s.l. Of these, the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1 and 16.2 km. a.m.s.l. are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150 and 100 mb. respectively.

RADIOSONDE DATA

January 1961 (Pausa 11 — Magha 11, 1282 Saka)

During the month, observations of upper air temperature, pressure and humidity were made at 13 stations in India as given in the list below. For a detailed description of the instruments used, a reference may be made to the I.M.D. Scientific Notes Nos. 112 and 113 (Volume IX).

LIST OF RADIOSONDE STATIONS IN INDIA

| S. No. | Name of station | Type of instrument used | Date of starting | Hours of routine observations in G.M.T. during the month | Remarks |
|--------|-----------------|-------------------------|--------------------|--|---------|
| 1 | Allahabad | Clock type | 1st October 1944 | 00 and 12 | |
| 2 | Bombay | Clock type | 7th September 1954 | 00 and 12 | |
| 3 | Calcutta | Clock type | 13th December 1946 | 00 and 12 | |
| 4 | Gauhati | Clock type | 22nd July 1955 | 00 and 12 | |
| 5 | Gwalior | Clock type | 28th June 1960 | 00 and 12 | |
| 6 | Jodhpur | Clock type | 17th April 1946 | 00 and 12 | |
| 7 | Madras | Fan type | 29th June 1946 | 00 and 12 | |
| 8 | Nagpur | Fan type | 1st October 1946 | 00 and 12 | |
| 9 | New Delhi | Clock type | 3rd December 1943 | 00 and 12 | |
| 10 | Port Blair | Fan type | 4th December 1949 | 00 and 12 | |
| 11 | Trivandrum | Fan type | 1st July 1947 | 00 and 12 | |
| 12 | Veraval | Fan type | 3rd October 1944 | 00 and 12 | |
| 13 | Visakhapatnam | Fan type | 8th December 1946 | 00 and 12 | |

NOTE : Number of observations refer to those of dynamic height.

Means are not worked out for temperature and dew point for the 1000 mb. surface and for dew point for standard pressure surfaces with temperature less than 273°A

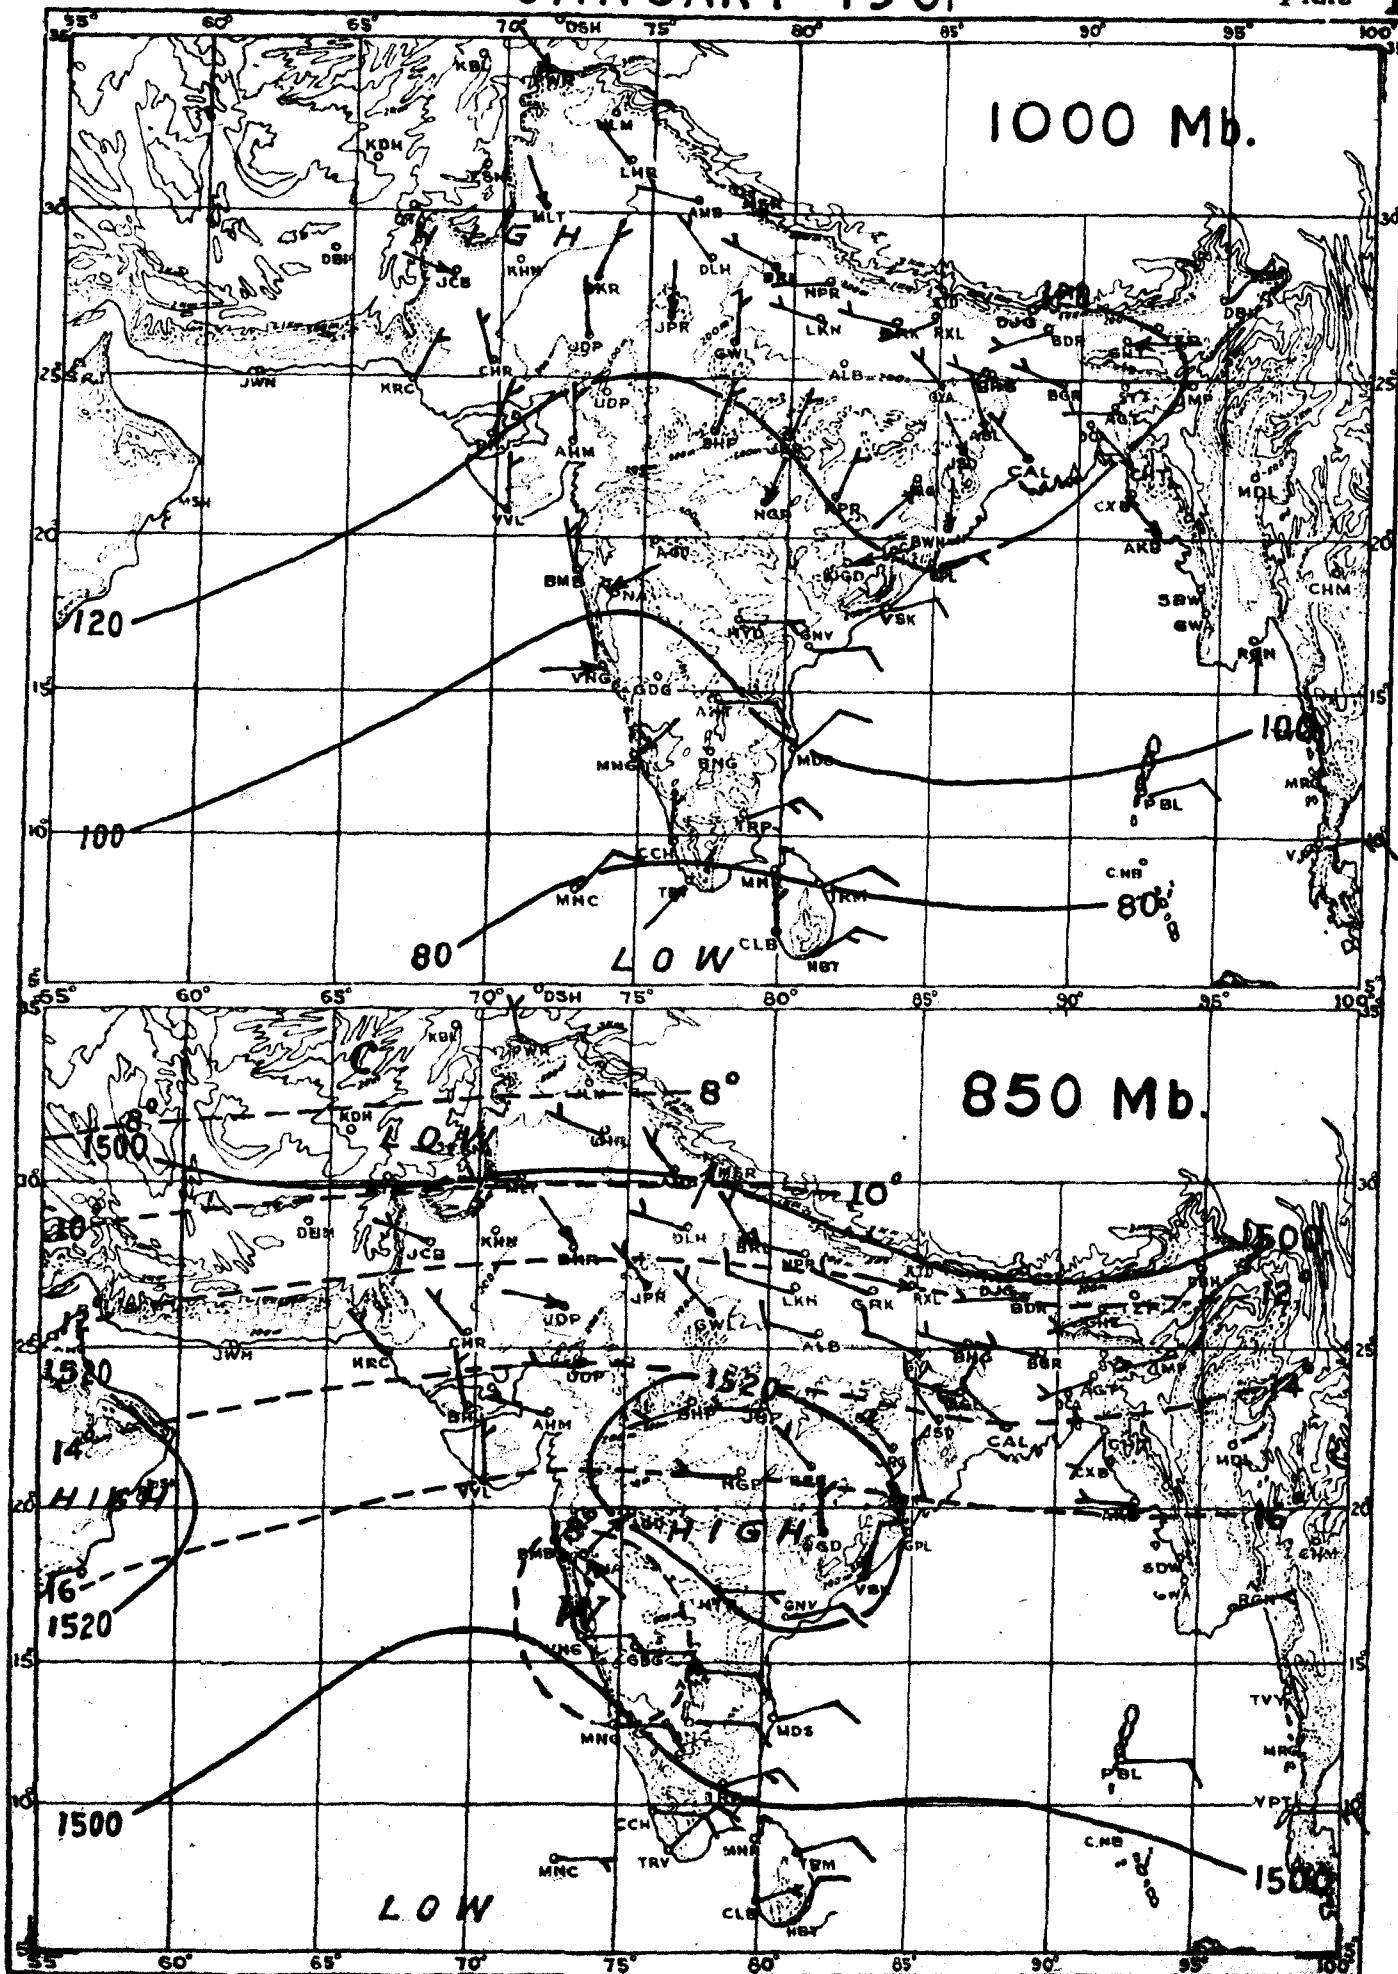

Means are not worked out for less than five observations at standard pressure surfaces.

INDIA WEATHER REVIEW, 1961

Monthly Weather Report

FEBRUARY

Published by authority of the Government of India

ATMOSPHERIC SCIENCES
LIBRARY

MAR 1 1967

E. S. S. A.

Chief features :—

- (i) Excessive rain or snow in north India during the first half of the month.
(ii) Cold wave in north India during the second week.

Four western disturbances moved across north India during the month. Of these, first three relating to the first half of the month were quite active and gave abundant rainfall in north India. The fourth disturbance which moved across the Punjab[I] by 19th was relatively feeble. Thereafter the weather remained mainly dry over north India. Special mention may be made of the second western disturbance of the month which was unusually active. It caused widespread rainfall over practically the whole of India outside the south Peninsula. In association with it, there were also a few heavy falls of snow in the Himalayas and of rain in the plains of north India. Angul reported 9cm of rain and Nainital 7 cm on 6th; Dehra Dun and Ambikapur 6 cm each on 7th and Asansol 7 cm and Jamshedpur 6 cm on 8th. The course and activity of each of the four western disturbances of the month are shown in the Table below :

Statement showing the movement and activity of western disturbances during February 1961.

| S. No. | Period | Course | Region affected | Nature of precipitation | Period | Remarks |
|--------|-----------|--|--|--|--|---------------------------------------|
| 1 | 1st-4th | East Afghanistan-N. W. F. P. Jammu and Kashmir. | Rajasthan Punjab plains | Scattered rain Fairly widespread rain Scattered rain | 2nd 2nd 3rd | |

Under the influence of an easterly wave, a depression developed in the south Bay of Bengal with centre near Lat. $4\frac{1}{2}^{\circ}$ N and Long. $86\frac{1}{4}^{\circ}$ E on the morning of 17th February. It moved slowly in a northerly direction till 21st and then weakened into a low pressure area over southwest and adjoining southeast Bay of Bengal on 22nd. This low pressure area moved westwards, weakened further and filled up over the southeast Arabian Sea by 25th. In association with the system, there was a good spell of rain in Bay Islands and also a few showers in the south Peninsula during the third week. The rainfall was fairly widespread in the Bay Islands on 18th and 19th.

Night temperatures were above normal over most of the country at the beginning of the month, being appreciably so over the eastern half of the country on 1st and 2nd February. In the rear of the first western disturbance of the month, the temperatures fell over northwest India and Gujarat and became below normal or nearly normal. In the wake of the next disturbance, night temperatures fell considerably and remained below normal over practically the whole country outside south Peninsula during the second week of February, being appreciably to markedly below normal at several places. There was a severe cold wave with night temperatures 8 to 10° C below normal in Gujarat State and neighbourhood on 8th and 9th. The cold weather conditions over the country gradually subsided and towards the end of February, the night temperatures were nearly normal over most of the country.

The rainfall during the month was in large deficit in Assam, west Madhya Pradesh, Madhya Maharashtra, Marathwada, Vidarbha, Telangana and Rayalaseema, in moderate deficit in Saurashtra, and Kutch, the Madras State and south Interior Mysore, in slight deficit in Jammu and Kashmir and east Rajasthan and normal in east Madhya Pradesh and Gujarat Region. It was in moderate excess in Bihar Plains and east Uttar Pradesh, in large excess in the Bay Islands, West Bengal, Orissa, Bihar Plateau, west Uttar Pradesh, the Punjab (I), west Rajasthan, the Konkan, coastal Andhra Pradesh, Kerala and the Arabian Sea Islands. There was no rain over the rest of the country outside Himachal Pradesh.

The mean maximum temperature was below normal in West Bengal, Orissa, Bihar State, Uttar Pradesh, the Punjab (I), Jammu and Kashmir, Rajasthan, Madhya Pradesh, Gujarat state and normal over the rest of the country outside Himachal Pradesh. The mean minimum temperature was above normal in the Bay Islands and Rayalaseema, below normal in east Rajasthan, west Madhya Pradesh, Gujarat Region, Madhya Maharashtra and Vidarbha and normal over the rest of the country outside Himachal Pradesh.

The mean relative humidity in the morning was above normal in the Bay Islands, the Punjab (I), Saurashtra and Kutch and south interior Mysore, below normal in Gujarat Region, Marathwada, Telangana and north Interior Mysore and normal over the rest of the country outside Himachal Pradesh.

The mean cloud amount in the morning was below normal in Rajasthan, normal in Gangetic West Bengal, Bihar State, Uttar Pradesh, the Punjab (I), Jammu and Kashmir, Gujarat State and Telangana and above normal over the rest of the country outside Himachal Pradesh.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 31 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. IST of the date noted in the succeeding column. Similarly the heaviest fall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. IST of the date given in the succeeding column.

POONA 5,

Dated the 31st March, 1961.

R. ANANTHAKRISHNAN,

for Director General of Observatories.

MONTHLY MEANS OF UPPER WINDS

February, 1961 (*Magha 12-Phalgun 9, 1882 Saka*)

During the month, observations of velocity and direction of upper winds were made at 53 stations in India. Out of these, at 41 stations all the observations were taken by means of pilot balloons and at 12 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. Particulars of these stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the Table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data up to 9.0 km. a.m.s.l. are given under Table IV and data above 9.0 km. a.m.s.l. under Table V.

In Tables IV and V :

n—represents the number of observations;

V—represents the mean wind speed in metres per second irrespective of direction;

v—represents the resultant mean velocity in metres per second;

D—represents the direction of the resultant mean wind in degrees East of North.

Mean and resultant winds are given in this publication for the following heights :

Surface, 0.15 km. a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0 and 36.0 km. a.m.s.l. Of these the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1 and 16.2 km. a.m.s.l. are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150 and 100 mb. respectively.

TABLE V—MONTHLY MEAN DIRECTIONS AND VELOCITIES OF UPPER WINDS

Winds above 9.0 km. above mean sea level

February, 1961 (Magha 12—Phalgunā 9, 1882 Saka)

RADIOSONDE DATA
February 1961 (Magha 12—Phalgun 9, 1882 Saka)

During the month, observations of upper air temperature, pressure and humidity were made at 13 stations in India as given in the list below. For a detailed description of the instruments used, a reference may be made to the I. M. D. Scientific Notes Nos. 112 and 113 (Volume IX).

LIST OF RADIOSONDE STATIONS IN INDIA

| Serial No. | Name of station | Type of instrument used | Date of starting | Hours of routine observations in G.M.T. during the month | Remarks |
|------------|-----------------|-------------------------|---------------------|--|--|
| 1 | Allahabad | Clock type | 1st October, 1944 | 00 and 12 | |
| 2 | Bombay | Clock type | 7th September, 1954 | 00 and 12 | |
| 3 | Calcutta | Clock type | 13th December, 1946 | 00 and 12 | Fan type used from 13-12-46 to 30-11-47. |
| 4 | Gauhati | Clock type | 22nd July, 1955 | 00 and 12 | |
| 5 | Gwalior | Clock type | 28th June, 1960 | 00 and 12 | |
| 6 | Jodhpur | Clock type | 17th April, 1946 | 00 and 12 | |
| 7 | Madras | Fan type | 29th June, 1946 | 00 and 12 | |
| 8 | Nagpur | Fan type | 1st October, 1946 | 00 and 12 | |
| 9 | New Delhi | Clock type | 3rd December, 1943 | 00 and 12 | |
| 10 | Port Blair | Fan type | 4th December, 1949 | 00 and 12 | |
| 11 | Trivandrum | Fan type | 1st July, 1947 | 00 and 12 | |
| 12 | Veraval | Fan type | 3rd October, 1944 | 00 and 12 | |
| 13 | Visakhapatnam | Fan type | 8th December, 1946 | 00 and 12 | |

NOTE.—Number of observations refer to those of dynamic height.

Means are not worked out for temperature and dew point for the 1000 mb. surface and for dew point for standard pressure surfaces with temperature less than 273°A.

Means are not worked out for less than five observations at standard pressure surfaces.

INDIA WEATHER REVIEW, 1961

Monthly Weather Report

MARCH

Published by authority of the Government of India

ATMOSPHERIC SCIENCES
LIBRARY

MAR 1 1967

E. S. S. A.
U. S. Dept. of Commerce

Chief feature—

Good amount of rainfall in Assam and Sub-Himalayan West Bengal, with deficiency of rainfall over the rest of the country.

Throughout the month there was a marked inflow of moist air from the Bay of Bengal into Assam and neighbourhood. This inflow got occasionally accentuated during the passage of Western Disturbances across the Assam Hills. Fairly widespread or local thundershowers occurred in Assam on twelve days of the month. A few noteworthy amounts of rainfall were : Haflong 17 cm. on 2nd, 19 cm. on 3rd, 7 cm on 19th, 9 cm on 20th and 7 cm on 21st, Kailashahr 8 cm on 19th and Silchar 15 cm on 20th. Severe squalls in Dibrugarh and Silchar were reported to have caused death of 14 persons in the beginning of the month.

Four western disturbances moved across the northern parts of the country. They were generally of feeble intensity and did not cause much of rainfall except in Assam and neighbourhood. The course and activity of each of the western disturbances is shown in the following tabular statement.

Statement showing the movement and activity of Western disturbances during the month of March 1961

| S. No. | Period | Course | Region affected | Nature of Precipitation | Period | Remarks |
|--------|-----------|--|--|--|-------------------------------|---|
| 1 | 2nd — 8th | Baluchistan-Punjabs-Western Himalayas-Nepal Himalayas-Assam Himalayas. | Jammu and Kashmir, Himachal Pradesh and Punjab-Kumaon hills } West Bengal Assam | Scattered rain/snow. Scattered thundershowers Fairly widespread or local thundershowers. | 5th,6th 6th,7th 6th-8th | Severe squalls in Dibrugarh and Silchar caused death of 14 persons and injury to about 100 persons. |
| 2 | 9th—14th | Baluchistan-Punjabs-Western Himalayas-Nepal Himalayas-Assam Himalayas | Jammu and Kashmir Assam | Scattered rain/snow Fairly widespread rain/snow Local or scattered thundershowers | 10th 11th 13th,14th | |
| 3 | 15th—21st | Baluchistan-Punjabs-Western Himalayas-Nepal Himalayas-Assam Himalayas. | Jammu and Kashmir, Himachal Pradesh and Punjab-Kumaon hills } Plains of west Uttar Pradesh and of the Punjab (I) Assam | Scattered thundershowers Scattered thundershowers Fairly Widespread or local thundershowers. | 16th-20th 18th,19th 20th,21st | A few heavy showers occurred in Assam on 20th and 21st. Silchar reported 15 cm. of rain on 20th. |
| 4 | 22nd—28th | Baluchistan-Punjabs-Western Himalayas-Nepal Himalayas-Assam Himalayas. | Jammu and Kashmir, Himachal Pradesh and Punjab-Kumaon hills } Bihar Plains and West Bengal Assam | Local or scattered thundershowers Scattered thundershowers Scattered thundershowers | 24th,26th 26th 26th-28th | A nor'wester swept Calcutta and suburbs on the night of 25th. |

Mainly dry weather prevailed over the Peninsula during the first half of the month. Scattered thundershowers, however, occurred later, particularly towards the close of the month.

Day temperatures were generally above normal in south Rajasthan, Gujarat State, north Maharashtra State, Madhya Pradesh and Bihar State from 10th to 20th March. They were appreciably above normal in these regions on some days.

"Copyright © 1961 by Manager of Publications, Government of India, Delhi-9".

The rainfall during the month was in large excess in Assam and Marathwada, in moderate excess in the Bay Islands and normal in Sub-Himalayan West Bengal. It was in slight defect in Jammu and Kashmir, in moderate defect in Rayalaseema and south Interior Mysore and in large defect Gangetic West Bengal, Orissa, Bihar Plateau, West Uttar Pradesh, the Punjab(I), west Rajasthan, Madhya Pradesh, Madhya Maharashtra, Vidarbha, coastal Andhra Pradesh, Telangana, the Madras State, north Interior Mysore and Kerala. There was no rain elsewhere over the rest of the country outside Himachal Pradesh.

The mean maximum temperature was above normal in Bihar Plateau, Rajasthan, Madhya Pradesh, Gujarat State, Madhya Maharashtra, Marathwada, Vidarbha, Telangana and Interior Mysore and normal over the rest of the country outside Himachal Pradesh. The mean minimum temperature was above normal in Bay Islands, Assam, West Bengal, Orissa, Rajasthan, Gujarat Region, Marathwada, Andhra Pradesh, the Madras State and Interior Mysore State.

The relative humidity in the morning was above normal in Orissa, the Punjab(I), Saurashtra and Kutch, Rayalaseema and South Interior Mysore, below normal in east Madhya Pradesh, Marathwada and Vidarbha and normal elsewhere over the country outside Himachal Pradesh.

The mean cloud amount in the morning was above normal in the Bay Islands, Orissa, east Uttar Pradesh, the Punjab (I), east Rajasthan, Gujarat Region, the Madras State, coastal Mysore and Kerala, below normal in Gangetic West Bengal, Bihar State, Vidarbha, Telangana and Rayalaseema and normal over the rest of the country outside Himachal Pradesh.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 14 chief political divisions and the 31 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. IST of the date noted in the succeeding column. Similarly the heaviest fall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. IST of the date given in the succeeding column.

POONA 5,

The 3rd August 1961.

TABLE III—SUMMARY OF OBSERVATIONS AT FIXED HOURS—MARCH, 1961 (PHALGUNA 10,—CHAITRA 10, 1883 SAKA)

| Division and station | Hour of observation I.S.T. | Station elevation in metres | Mean pressure in millibars | | Mean temperature in °C | | | | Cloud amount (Oktas) | | Wind speed (kms. p.h.) | | No. of observations | | | | | | | | | | | | | | | | | |
|---|----------------------------|-----------------------------|----------------------------|--|------------------------|----------|----------|-----------|-------------------------|---------------------|------------------------|-------------|-----------------------|----------------------------------|----|----|----|----|----|----|----|----|------|----------|----|----|----|----|---|---|
| | | | At mean sea level | At height in g.p.m. or height in g.p.m. of nearest standard barometric level | At station level | Dry bulb | Wet bulb | Dew point | Vapour pressure in mbs. | Relative humidity % | Departure from normal | Mean amount | Departure from normal | Mean wind speed, in km. per hour | N | NE | E | SE | S | SW | W | NW | Calm | Variable | | | | | | |
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 | 21 | 22 | 23 | 24 | 25 | 26 | 27 | 28 | | |

MONTHLY MEANS OF UPPER WINDS

March 1961 (Phalgun 10, 1882—Chaitra 10, 1883 Saka)

During the month, observations of velocity and direction of upper winds were made at 53 stations in India. Out of these, at 41 stations all the observations were taken by means of pilot balloons and at 12 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. Particulars of the stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data up to 9.0 km. a.m.s.l. are given under Table IV and data above 9.0 km. a.m.s.l. under Table V.

In Tables IV and V :

n—represents the number of observations;

V—represents the mean wind speed in metres per second irrespective of direction;

v—represents the resultant mean velocity in metres per second;

D—represents the direction of the resultant mean wind in degrees East of North.

Mean and resultant winds are given in this publication for the following heights :

Surface, 0.15 km. a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1
16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0 and 36.0 km. a.m.s.l. Of these, the levels 1.5, 3.0
5.4, 7.2, 9.0, 12.0, 14.1 and 16.2 km. a.m.s.l. are considered as the best approximations
to the standard pressure levels 850, 700, 500, 400, 300, 200, 150 and 100 mb. respectively.

PARTICULARS OF PILOT BALLOON AND RAWIN STATIONS IN INDIA

RADIOSONDE DATA**March 1961 (Phalguna 10, 1882—Chaitra 10, 1883 Saka)**

During the month, observations of upper air temperature, pressure and humidity were made at 13 stations in India as given in the list below. For a detailed description of the instruments used, a reference may be made to the I.M.D. Scientific Notes Nos. 112 and 113 (Volume IX).

LIST OF RADIOSONDE STATIONS IN INDIA

| S. No. | Name of Station | Type of instrument used | Date of starting | Hours of routine observations in G.M.T. during the month | Remarks |
|--------|-----------------|-------------------------|---------------------|---|---------|
| 1 | Allahabad | Clock type | 1st October, 1944 | 00 and 12 | |
| 2 | Bangalore | Fan type | 10th March, 1961 | 00 | |
| 3 | Bombay | Clock type | 7th September, 1954 | 00 and 12 | |
| 4 | Calcutta | Clock type | 13th December, 1946 | 00 and 12 | |
| 5 | Gauhati | Clock type | 22nd July, 1955 | 00 and 12 | |
| 6 | Jodhpur | Clock type | 17th April, 1946 | 00 and 12 | |
| 7 | Madras | Fan type | 29th June, 1946 | 00 and 12 | |
| 8 | Nagpur | Fan type | 1st October, 1946 | 00 and 12 | |
| 9 | New Delhi | Clock type | 3rd December, 1943 | 00 and 12 | |
| 10 | Port Blair | Fan type | 4th December, 1946 | 00 and 12 | |
| 11 | Trivandrum | Fan type | 1st July, 1947 | 00 and 12 | |
| 12 | Veraval | Fan type | 3rd October, 1944 | 00 and 12 | |
| 13 | Visakhapatnam | Fan type | 8th December, 1946 | 00 and 12 | |

NOTE : Number of observations refer to those of dynamic height.
Means are not worked out for temperature and dew point for the 100mb. surface, and for dew point for standard pressure surfaces with temperatures less than 273°A.
Means are not worked out for less than five observations at standard pressure surfaces.

INDIA WEATHER REVIEW, 1961

Monthly Weather Report

April

Published by authority of the Government of India

ATMOSPHERIC SCIENCES
LIBRARY

MAR 1 1967

Chief feature :

Good thundershower activity over Jammu and Kashmir, the south Peninsula and Assam.

Four western disturbances moved across the northern parts of the country during the month. They were generally of moderate intensity and gave good rainfall over Jammu and Kashmir. The movement and activity of each of these western disturbances is given in the following tabular statement.

Statement showing the movement and activity of Western disturbances during the month of April 1961

| S. No. | Period | Course | Region affected | Nature of precipitation | Period | Remarks |
|--------|-----------|--|---|---|---------------------------------|--|
| 1 | 1st—5th | Baluchistan—Punjab—Western Himalayas | Punjab (I) Jammu and Kashmir | Scattered thundershowers Local thundershowers | 2nd—5th 4th | |
| 2 | 7th—12th | Baluchistan—Punjab—Western Himalayas | Rajasthan Punjab (I) Himachal Pradesh Jammu and Kashmir | Scattered thundershowers Local or scattered thundershowers | 10th | |
| 3 | 12th—15th | Baluchistan—Punjab—Western Himalayas | West Rajasthan Punjab (I) Himachal Pradesh Jammu and Kashmir | Scattered thundershowers Local thundershowers | 13th | |
| 4 | 19th—23rd | Afghanistan—N.W.F.P.—Jammu and Kashmir | Punjab (I) Himachal Pradesh Jammu and Kashmir | Scattered thundershowers Local thundershowers Local or scattered thundershowers | 20th, 21st 21st 20th—23rd | Srinagar reported 5 cm. of rain on 11th. |

In association with marked incursion of moist air from the Bay of Bengal into the Peninsula there was considerable thunderstorm activity over this region, particularly over the south Peninsula during the first week of the month. Tuticorin reported 13 cm of rain on 2nd and Bangalore 5 cm on 3rd. Incursion of moist air from the Bay of Bengal also took place over Assam during the last ten days of the month. During this period, fairly widespread or local thundershowers occurred in Assam on three days and scattered thundershowers on other days. Haslong and Dhubri reported 5 cm of rain each on 22nd, Sibsagar 5 cm on 23rd, North Lakhimpur 9 cm and Pasighat 6 cm on 24th and Cherrapunji 16 cm on 25th.

Day temperatures were generally below normal in northwest India during the first fortnight of the month, being appreciably so in west Rajasthan from 10th to 12th April. They were above normal in Andhra Pradesh, Orissa and east Madhya Pradesh from 13th to 24th April and in West Bengal, Bihar and Uttar Pradesh from 13th to 30th. They were appreciably above normal in east Uttar Pradesh, east Madhya Pradesh, Bihar Plateau and adjoining West Bengal from 22nd to 24th.

The rainfall during the month was in large excess in the Bay Islands and south Interior Mysore, in moderate excess in west Rajasthan, in slight excess in Jammu and Kashmir and east Madhya Pradesh and normal in the Punjab (I), Madhya Maharashtra and coastal and north Interior Mysore. It was in slight defect in Marathwada and Kerala, in moderate defect in Assam, east Rajasthan, west Madhya Pradesh, Vidarbha, coastal Andhra Pradesh, Telengana and the Arabian Sea Islands and in large defect in West Bengal, Orissa, Bihar State, Uttar Pradesh, Saurashtra and Kutch, Rayalseema and the Madras state. There was no rain elsewhere over the country outside Himachal Pradesh.

"Copyright © 1961 by the Manager of Publications, Govt. of India, Delhi-8."

The mean maximum temperature was above normal in Assam, Bihar Plateau, Madhya Pradesh, Maharashtra, Marathwada and Telangana, below normal in Jammu and Kashmir and normal over the rest of the country outside Himachal Pradesh. The mean minimum temperature was above normal in the Bay Islands, Assam, Gangetic West Bengal, Marathwada and Telangana and normal over the rest of the country outside Himachal Pradesh.

The mean relative humidity in the morning was above normal in the Punjab (I), west Rajasthan and south Interior Mysore below normal in Gangetic West Bengal, east Rajasthan and normal over the rest of the country outside Himachal Pradesh.

The mean cloud amount in the morning was below normal in the Bay Islands, West Bengal, Bihar Plateau, Vidarbha and coastal Andhra Pradesh, normal in Assam, Orissa, Bihar Plains, the Punjab (I), east Rajasthan, east Madhya Pradesh, the Konkan, Marathwada, Telangana and Rayalseema and above normal over the rest of the country outside Himachal Pradesh.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 31 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. IST of the date noted in the succeeding column. Similarly the heaviest fall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. IST of the date given in the succeeding column.

Poona-5,

The 18th August, 1961.

R. ANANTHAKRISHNAN,

for DIRECTOR GENERAL OF OBSERVATORIES.

TABLE III—SUMMARY OF OBSERVATIONS AT FIXED HOURS—APRIL, 1931 (CHAITRA II—VA ISAKHA 10, 1883 SAKA)

| Division and station | Hour of observation I.S.T. | Station elevation in metres. | Mean pressure in millibars | | Mean temperature in °C | | | At mean sea level or height in g.p.m. of the nearest standard isobaric level. | At station level. | Departure from normal. | Dry bulb | Wet bulb | Dew point | Vapour pressure in mbs. | Relative humidity % | Departure from normal | Cloud amount (Oktas) | Wind speed (Km.p.h.) | No. of observations | | | | | | | | | | | | | | | | | |
|--|----------------------------|------------------------------|----------------------------|----------|------------------------|-------------|------|---|-------------------|------------------------|----------|----------|-----------|-------------------------|---------------------|-----------------------|----------------------|----------------------|---------------------|----|----|----|----|----|----|----|------|----------|----|----|----|----|----|----|----|---|
| | | | Mean | pressure | Mean | temperature | | | | | | | | | | | | | N | NE | E | SE | S | SW | W | NW | Calm | Variable | | | | | | | | |

TABLE III.—SUMMARY OF OBSERVATIONS AT FIXED HOURS—APRIL, 1961 (CHAITRA 11, —VAISAKHA 10, 1883 SAKA)

(R) Register not received.

*Data not reliable.

[†]Data included under 'Nepal'.

Observations for 17 days.

MONTHLY MEANS OF UPPER WINDS

April 1961 (Chaitra 11—Vaisakha 10, 1883 Saka)

During the month, observations of velocity and direction of upper winds were made at 53 stations in India. Out of these, at 41 stations all the observations were taken by means of pilot balloons and at 12 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. Particulars of the stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the Table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data up to 9.0 km. a. m. s. l. are given under Table IV and data above 9.0 km. a. m. s. l. under Table V.

In Tables IV and V :

n—represents the number of observations ;

V—represents the mean wind speed in metres per second irrespective of direction ;

v—represents the resultant mean velocity in metres per second ;

D—represents the direction of the resultant mean wind in degrees East of North.

Mean and resultant winds are given in this publication for the following heights :

Surface, 0.15 km. a. g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0 and 36.0 km. a. m. s. l. Of these, the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1 and 16.2 km. a. m. s. l. are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150 and 100 mb. respectively.

RADIOSONDE DATA**List of Radiosonde Stations in India**

During the month, observations of upper air temperature, pressure and humidity were made at 13 stations in India as given in the list below. For a detailed description of the instruments used, a reference may be made to the I. M. D. Scientific Notes Nos. 112 and 113 (Volume IX).

LIST OF RADIOSONDE STATIONS IN INDIA

| Serial No. | Name of Station | Type of instrument used | Date of starting | Hours of routine observations in GMT during the month | Remarks |
|------------|-----------------|-------------------------|---------------------|---|--|
| 1 | Allahabad | Clock type | 1st October, 1944 | 00 and 12 | |
| 2 | Bangalore | Fan type | 10th March, 1961 | 00 | |
| 3 | Bombay | Clock type | 7th September 1954 | 00 and 12 | |
| 4 | Calcutta | Clock type | 13th December, 1946 | 00 and 12 | Fan type used from 13-12-46 to 30-11-47. |
| 5 | Gauhati | Clock type | 22nd July, 1955 | 00 and 12 | |
| 6 | Jodhpur | Clock type | 17th April, 1946 | 00 and 12 | |
| 7 | Madras | Fan type | 29th June, 1946 | 00 and 12 | |
| 8 | Nagpur | Fan type | 1st October, 1946 | 00 and 12 | |
| 9 | New Delhi | Clock type | 3rd December, 1943 | 00 and 12 | |
| 10 | Port Blair | Fan type | 4th December, 1946 | 00 and 12 | |
| 11 | Trivandrum | Fan type | 1st July, 1947 | 00 and 12 | |
| 12 | Veraval | Fan type | 3rd October, 1944 | 00 and 12 | |
| 13 | Visakhapatnam | Fan type | 8th December, 1946 | 00 and 12 | |

INDIA WEATHER REVIEW, 1961

Monthly Weather Report

May

*Published by authority of the Government of India*ATMOSPHERIC SCIENCES
LIBRARY

Chief features—

- (i) Development of two severe cyclonic storms in the Bay of Bengal and third severe cyclonic storm in the Arabian Sea,
- (ii) Early onset of the monsoon over the south Peninsula, and
- (iii) Heat wave in Bihar State.

MAR 1 1967
E. S. S. A.
U. S. Dept. of Commerce

In association with an easterly wave, a depression developed in the Andaman Sea with centre about 350 kms east of Port Blair on 5th May. Moving in a northwesterly direction, it intensified into a cyclonic storm on the evening of 6th which became severe by the evening of 7th. It moved in a northerly direction and crossed the Sunderbans coast near Barisal early on the morning of 9th. Thereafter, it weakened rapidly and moved away as a low pressure wave across Assam on the 10th May. In association with it, the north Bay Islands experienced a spell of very heavy rains from 4th to 7th. Local or scattered thundershowers also occurred in Orissa, West Bengal and Assam from 8th to 10th. A few noteworthy amounts were Mayabandar 12 cm each on 5th and 6th and 40 cm on 7th, Long Island 15 cm on 7th, Haflong 16 cm, Chaparmukh 14 cm, Shillong 13 cm and Cherrapunji 11 cm on 10th. A severe squall of 90 knots caused extensive damage at Agartala Airport on 10th. According to press reports, a tidal bore 16 feet high "roared menacingly over the shore islands of Ramgati, Hatia and Sonedwip" in East Pakistan when the storm struck the coast.

Another easterly wave entered the Andaman Sea on 12th May, crossed the south Peninsula by 16th and gave rise to a trough of low pressure in southeast Arabian Sea off the Malabar coast on 17th. This trough gradually shifted northwards along the west coast. It concentrated into a depression and then rapidly into a cyclonic storm centre about 150 kms westsouthwest of Honavar on the morning of 23rd. It intensified further into a severe cyclonic storm of small extent that evening and crossed coast between Devgad and Ratnagiri on the night of 24th-25th May. Later, it took an easterly course, gradually weakened and became unimportant near coastal Andhra Pradesh by 28th. Under the influence of this system, considerable thunderstorm activity occurred in the south Peninsula from 14th to 17th. The Arabian Sea branch of the monsoon advanced into extreme south Kerala on 18th and rapidly extended northwards upto Lat. 16° N by 22nd about ten to fourteen days earlier than the normal date. A few noteworthy amounts of rainfall were : Karwar 17 cm on 21st, Vengurla 30 cm, Karwar 21 cm, Honavar 17 cm and Fort Cochin and Palghat 15 cm each on 22nd; Amini Devi 15 cm on 23rd; Devgad 18 cm and Kolhapur 16 cm on 25th and Mercara 16 cm on 26th. As a result of the gales accompanying the severe cyclonic storm, about five lakh fruit trees were reported to have been razed to the ground in the four talukas of Sawantwadi, Vengurla, Malwan and Kudal. About 1700 houses were reported to have been completely destroyed and about 25,000 houses partially damaged.

In association with another easterly wave, a depression developed over north Andaman Sea centred near Lat. 15° N and Long. 95° E on the morning of 27 May. Moving northwestwards, it concentrated into a cyclonic storm by 28th morning and became severe during the next 24 hours. Later, it recurved and crossed the East Pakistan coast near Chittagong on the morning of 30th. Thereafter, it weakened rapidly and lay as a shallow low over central Assam on the 31st. It became unimportant by 1st June. Under its influence, the Bay branch of the monsoon strengthened and advanced into Assam on 31st May. A few heavy to very heavy falls of rain were reported from the Bay Islands and Assam, noteworthy amounts being Port Blair 18 cm on 27th and Cherrapunji 22 cm and Agartala 15 cm on 31st May. Heavy to very heavy rains accompanied by gales and squalls occurred in the coastal districts of East Pakistan. According to newspaper reports, winds reaching 100 m.p.h. accompanied by a tidal wave were experienced at some places in the coastal districts of East Pakistan along and near the track of the storm.

Day temperatures were generally above normal in Bihar State and neighbourhood from 11th May to 3rd June, being appreciably so at a number of places from 13th to 22nd May and again from 26th to 31st May. The temperatures were markedly above normal at a few places in Bihar State and neighbourhood from 19th to 21st May and again from 26th to 28th May. According to press reports, this hot spell was responsible for over seventy-five deaths in Bihar State and for a few deaths in the adjoining States.

The rainfall during the month was in large defect in east Uttar Pradesh, east Rajasthan, Gujarat State, in moderate defect in west Uttar Pradesh, Jammu & Kashmir and coastal Andhra Pradesh, in slight defect in Gangetic West Bengal and Bihar State and normal in Assam, Sub-Himalayan West Bengal, west Rajasthan and east Madhya Pradesh. It was in slight excess in Orissa, the Punjab (I), west Madhya Pradesh, and the Madras State and in large excess over the rest of the country outside Himachal Pradesh.

The mean maximum temperature was above normal in Bihar Plateau and east Uttar Pradesh, below normal in Jammu and Kashmir, Madhya Maharashtra, Marathwada, Rayalaseema and Mysore State and normal over the rest of the country outside Himachal Pradesh. The mean minimum temperature was below normal in coastal Mysore and normal over the rest of the country outside Himachal Pradesh.

The mean relative humidity in the morning was above normal in the Bay Islands, the Punjab(I), east Madhya Pradesh, Saurashtra and Kutch, Madhya Maharashtra, Marathwada, Vidarbha, Andhra Pradesh and the Mysore State and normal over the rest of the country outside Himachal Pradesh.

=====
SG.7-2

The mean cloud amount in the morning was below normal in Gangetic West Bengal and Bihar Plains, normal in Assam, Sub-Himalayan West Bengal, Orissa, Bihar Plateau, west Uttar Pradesh, the Punjab(I), coastal Andhra Pradesh, Rayalseema and coastal Mysore and above normal over the rest of the country outside Himachal Pradesh.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 31 sub-divisions. The stations whose Observations are used for preparing these means are given in the subsequent Tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. IST of the date noted in the succeeding column. Similarly the heaviest fall in 24 hours for any Station denotes the amount recorded during the 24 hours ending at 0830 hrs. IST of the date given in the succeeding column.

POONA 5.

The 20th October, 1961.

R. ANANTHAKRISHNAN,

for Director General of Observatories.

MONTHLY MEANS OF UPPER WINDS

May 1961 (Vaisakha 11—Jyaistha 10, 1883 Saka)

During the month, observations of velocity and direction of upper winds were made at 53 stations in India. Out of these, at 41 stations all the observations were taken by means of pilot balloons and at 12 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. Particulars of the stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data up to 9.0 km. a.m.s.l. are given under Table IV and data above 9.0 km. a.m.s.l. under Table V.

In Tables IV and V :

n—represents the number of observations;

V—represents the mean wind speed in metres per second irrespective of direction;

v—represents the resultant mean velocity in metres per second;

D—represents the direction of the resultant mean wind in degrees East of North.

Mean and resultant winds are given in this publication for the following heights :

Surface, 0.15 km.a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0 and 36.0 km. a.m.s.l. Of these, the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1 and 16.2 km. a.m.s.l. are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150 and 100 mb. respectively.

PARTICULARS OF PILOT BALLOON AND RAWIN STATIONS IN INDIA

| No. | Station | Lat. N | Long. E | Height of Anemometer head a.m.s.l. in metres | Date of opening | Approximate times of flights (IST) | | | |

RADIOSONDE DATA

May 1961 (Vaisakha 11-Jyaistha 10, 1883 Saka)

During the month, observations of upper air temperature, pressure and humidity were made at 13 stations in India as given in the list below. For a detailed description of the instruments used, a reference may be made to the I.M.D. Scientific Notes Nos. 112 and 113 (Volume IX).

LIST OF RADIOSONDE STATIONS IN INDIA

| S. No. | Name of station | Type of instrument used | Date of starting | Hours of routine observa-tions in G.M.T. during the month | Remarks |
|--------|-----------------|-------------------------|--------------------|---|--|
| 1 | Allahabad | Clock type | 1st October 1944 | 00 and 12 | |
| 2 | Bangalore | Fan type | 10th March 1961 | 00 and 12 | |
| 3 | Bombay | Clock type | 7th September 1954 | 00 and 12 | |
| 4 | Calcutta | Clock type | 13th December 1946 | 00 and 12 | Fan type used from 13-12-46 to 30-11-47. |
| 5 | Gauhati | Clock type | 22nd July 1955 | 00 and 12 | |
| 6 | Jodhpur | Clock type | 17th April 1946 | 00 and 12 | |
| 7 | Madras | Fan type | 29th June 1946 | 00 and 12 | |
| 8 | Nagpur | Fan type | 1st October 1946 | 00 and 12 | |
| 9 | New Delhi | Clock type | 3rd December 1943 | 00 and 12 | |
| 10 | Port Blair | Fan type | 4th December 1946 | 00 and 12 | |
| 11 | Trivandrum | Fan type | 1st July 1947 | 00 and 12 | |
| 12 | Veraval | Fan type | 3rd October 1944 | 00 and 12 | |
| 13 | Visakhapatnam | Fan type | 8th December 1946 | 00 and 12 | |

NOTE : Number of observation refer to those of dynamic height.

Means are not worked out for temperature and dew point for the 1000 mb. surface and for standard pressure surfaces with temperature less than 273°A.

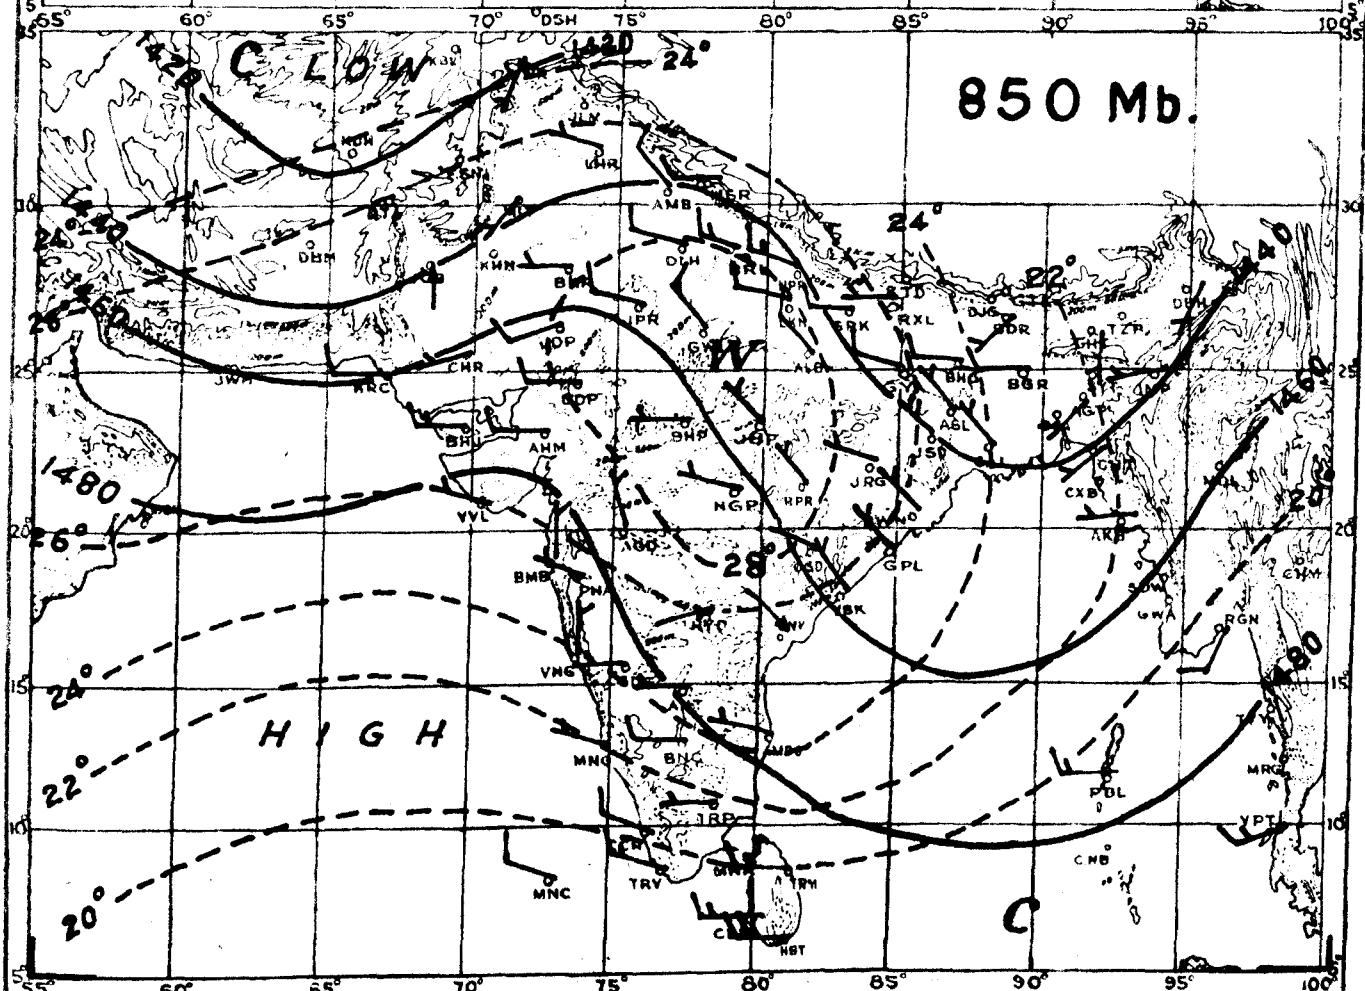

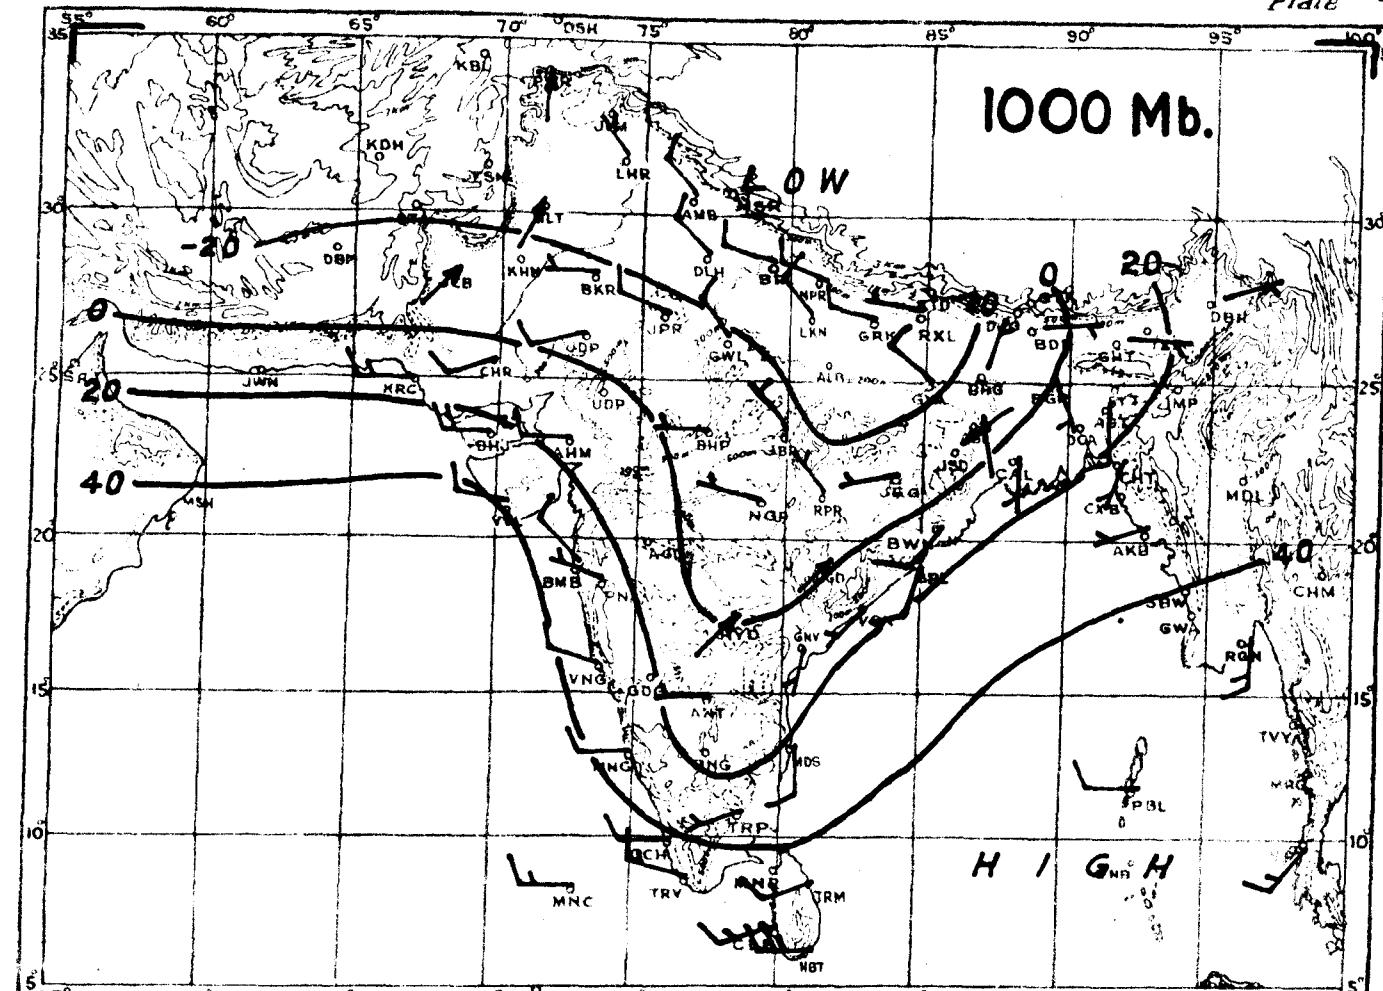

Means are not worked out for less than five observation at standard pressure surfaces.

INDIA WEATHER REVIEW, 1961

Monthly Weather Report

JUNE

*Published by authority of the Government of India*ATMOSPHERIC SCIENCES
LIBRARY

MAR 1 1967

E. S. S. A.

U.S. Dept. of Commerce

Chief features :—

- (i) Development of two depressions in the Bay of Bengal and of one cyclonic storm in the Arabian Sea;
- (ii) Extension of the monsoon over the whole country by 21st June; and
- (iii) Vigorous monsoon conditions along the west coast towards the end of June.

The previous month's severe cyclonic storm of the Bay of Bengal, which had struck East Pakistan coast on 30th May and lay as a shallow low over central Assam on 31st May, moved away northeastwards by 2nd June. Under its influence, fairly widespread rainfall with a few very heavy falls occurred in Assam on 1st and 2nd. Cherrapunji recorded 28 cm on 1st and 22 cm on 2nd, Tura 32 cm and Haflong 15 cm on 2nd.

An upper air trough extending from West Pakistan to the north and adjoining central Arabian Sea persisted during the first week of the month. Also, in association with an easterly wave, a depression formed over the head Bay of Bengal with centre about 200 kms east of Sandheads on the morning of 8th June. It moved to Bihar Plateau and adjoining northeast Madhya Pradesh on 10th remained practically stationary for two days and then recurved northeastwards. It filled up over Bihar Plains and neighbourhood by 15th. Under the influence of these two systems, the monsoon strengthened along the west coast and advanced as a feeble current into West Bengal, Orissa, Bihar State, east Uttar Pradesh, east Madhya Pradesh and Maharashtra State on 6th June. Active to vigorous monsoon conditions prevailed over some parts of northeast India and in east Madhya Pradesh between 10th and 13th. The monsoon also extended to west Madhya Pradesh, the Punjab-Kumaon hills and Himachal Pradesh by 13th. Ratnagiri reported 19 cm of rain on 9th, Raigarh 19 cm on 11th, Champa 13 cm on 12th and Darjeeling 17 cm on 13th. Cherrapunji reported 25 cm on 11th, 39 cm on 12th, 40 cm on 13th and 30 cm on 14th.

In association with an easterly wave, an upper air low developed over the east central Bay of Bengal off the Arakan coast on 16th. It moved in a westerly direction, crossed the Peninsula and emerged into east central Arabian Sea where it developed into a depression centred about 200 kms westnorthwest of Bombay on 21st morning. Moving northwestwards, it intensified into a cyclonic storm with centre about 150 kms west of Porbandar on 23rd morning. It recurved, crossed Kutch coast near Naliya the same night and progressively weakened. It merged into the seasonal low on 28th. Under its influence, general revival of the monsoon took place over the country on 18th and it extended to cover the whole country by 21st. Fairly widespread rainfall occurred in the belt extending from coastal Andhra Pradesh to the south Konkan from 19th to 21st and in the north Konkan and Saurashtra and Kutch from 21st to 24th. Fairly widespread rain also occurred in west Rajasthan from 23rd to 26th. A few noteworthy amounts of rainfall were : Gulbarga 7 cm on 20th, Bombay 8 cm on 21st, Dwarka 8 cm on 24th and Barmer 10 cm on 26th.

Under the influence of another easterly wave, a depression developed over the east central Bay of Bengal with centre above 200 kms southwest of Sandoway on the morning of 27th. It intensified into a deep depression, crossed the Sunderbans coast on the afternoon of 28th and weakened rapidly. It filled up over Bihar State on 30th. In association with it, the monsoon was active in West Bengal, Bihar State and the Punjab-Kumaon hills and vigorous along the west coast towards the close of the month. A few noteworthy amounts of rainfall were : Mahabaleshwar 36 cm, Ratnagiri 24 cm and Mangalore 20 cm on 26th, Kozhikode 23 cm on 27th, Askote 19 cm and Nainital 18 cm on 29th and Mercara 27 cm and Karwar 25 cm on 30th.

Rainfall for the month was in large excess in Bihar Plateau, west Rajasthan, Saurashtra and Kutch, coastal Andhra Pradesh, Rayalseema, the Madras State, Kerala and the Arabian Sea Islands, in moderate excess in Jammu and Kashmir, east Madhya Pradesh and coastal and south Interior Mysore, in slight excess in Gangetic West Bengal, Orissa, Bihar Plains the Konkan, Madhya Maharashtra, Marathwada and north Interior Mysore and normal in the Punjab (I) and Gujarat Region. It was in slight defect in the Bay Islands and in moderate defect over the rest of the country outside Himachal Pradesh.

"Copyright © 1961 by Manager of Publications, Government of India, Delhi-8"

The mean maximum temperature was below normal in Orissa, Bihar State, west Rajasthan, east Madhya Pradesh, Marathwada, Vidarbha, Andhra Pradesh, the Madras State and Interior Mysore State and normal over the rest of the country outside Himachal Pradesh.

The mean minimum temperature was above normal in Jammu and Kashmir, below normal in east Madhya Pradesh, Gujarat Region, Vidarbha and coastal Mysore and normal over the rest of the country outside Himachal Pradesh.

The mean relative humidity in the morning was above normal in Bihar State, the Punjab (I), east Madhya Pradesh, Saurashtra and Kutch, Telangana, Rayalseema the Madras State and Interior Mysore State, below normal in Jammu and Kashmir and normal over the rest of the country outside Himachal Pradesh.

The mean cloud amount in the morning was above normal in east Uttar Pradesh, east Rajasthan, the Madras State and north Interior Mysore, below normal in the Punjab (I) and normal over the rest of the country outside Himachal Pradesh.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 31 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. IST of the date noted in the succeeding column. Similarly the heaviest fall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. IST of the date given in the succeeding column.

POONA 5,

Dated the 18th August, 1961.

R. ANANTHAKRISHNAN,

for Director General of Observatories.

Errata to M.W.R. for June 1961 (Jyaistha 11 ~ Asadha 9, 1883 Saka)

TABLE III—SUMMARY OF OBSERVATIONS AT FIXED HOURS—JUNE, 1961 (JYAISTA 11—ASADHA 9, 1883 SAKA)

| Division and station | Hour of observation I.S.T. | Station elevation in metres | Mean pressure in millibars. | | | Mean temperature in °C. | | | Vapour pressure in mbs. | | | Cloud amount (Okta) | | Wind speed (km p.h.) | | | No. of observations | | | | | | | | | | | | |
|--|----------------------------|-----------------------------|--|--------|------|-------------------------|------|------|-------------------------|----|-----|---------------------|------|----------------------|-----------------------|----|----------------------------------|----|----|----------------|----|----------------|----|----|----|----|----|----|---|
| | | | At mean sea level or height in g.p.m. of nearest standard isobaric level | | | At station level | | | Departure from normal | | | Relative humidity % | | | Departure from normal | | Mean wind speed, in km. per hour | | | Wind direction | | Wind direction | | | | | | | |
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 | 21 | 22 | 23 | 24 | 25 | 26 | 27 | 28 | |

MONTHLY MEANS OF UPPER WINDS

June, 1961 (*Jyaistha 11-Asadha 9, 1883 Saka*)

During the month, observations of velocity and direction of upper winds were made at 53 stations in India. Out of these, at 41 stations all the observations were taken by means of pilot balloons and at 12 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. Particulars of these stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the Table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data up to 9.0 km. a.m.s.l. are given under Table IV and data above 9.0 km. a.m.s.l. under Table V.

In Tables IV and V :

n—represents the number of observations;

V—represents the mean wind speed in metres per second irrespective of direction;

v—represents the resultant mean velocity in metres per second;

D—represents the direction of the resultant mean wind in degrees East of North.

Mean and resultant winds are given in this publication for the following heights :

Surface, 0.15 km. a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0 and 36.0 km. a.m.s.l. Of these the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1 and 16.2 km. a.m.s.l. are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150 and 100 mb. respectively.

TABLE V—MONTHLY MEAN DIRECTIONS AND VELOCITIES OF UPPER WINDS

Winds above 9,0 km. above mean sea level

June, 1961 (Jyaisha 11—Asadha 9, 1383 Saka)

RADIOSONDE DATA
June 1961 (Jyaistha 11—Asadha 9, 1883 Saka)

During the month, observations of upper air temperature, pressure and humidity were made at 13 stations in India as given in the list below. For a detailed description of the instruments used, a reference may be made to the I. M. D. Scientific Notes Nos. 112 and 113 (Volume IX).

LIST OF RADIOSONDE STATIONS IN INDIA

| Serial No. | Name of station | Type of instrument used | Date of starting | Hours of routine observations in G.M.T. during the month | Remarks |
|------------|-----------------|-------------------------|---------------------|--|--|
| 1 | Allahabad | Clock type | 1st October, 1944 | 00 and 12 | |
| 2 | Bangalore | Fan type | 10th March, 1961 | 00 and 12 | |
| 3 | Bombay | Clock type | 7th September, 1954 | 00 and 12 | |
| 4 | Calcutta | Clock type | 13th December, 1946 | 00 and 12 | Fan type used from 13-12-46 to 30-11-47. |
| 5 | Gauhati | Clock type | 22nd July, 1955 | 00 and 12 | |
| 6 | Jodhpur | Clock type | 17th April, 1946 | 00 and 12 | |
| 7 | Madras | Fan type | 29th June, 1946 | 00 and 12 | |
| 8 | Nagpur | Fan type | 1st October, 1946 | 00 and 12 | |
| 9 | New Delhi | Clock type | 3rd December, 1943 | 00 and 12 | |
| 10 | Port Blair | Fan type | 4th December, 1946 | 00 and 12 | |
| 11 | Trivandrum | Fan type | 1st July, 1947 | 00 and 12 | |
| 12 | Veraval | Fan type | 3rd October, 1944 | 00 and 12 | |
| 13 | Visakhapatnam | Fan type | 8th December, 1946 | 00 and 12 | |

Note.—Number of observations refer to those of dynamic height.

Means are not worked out for temperature and dew point for the 1000 mb. surface and for dew point for standard pressure surfaces with temperature less than 273°A.

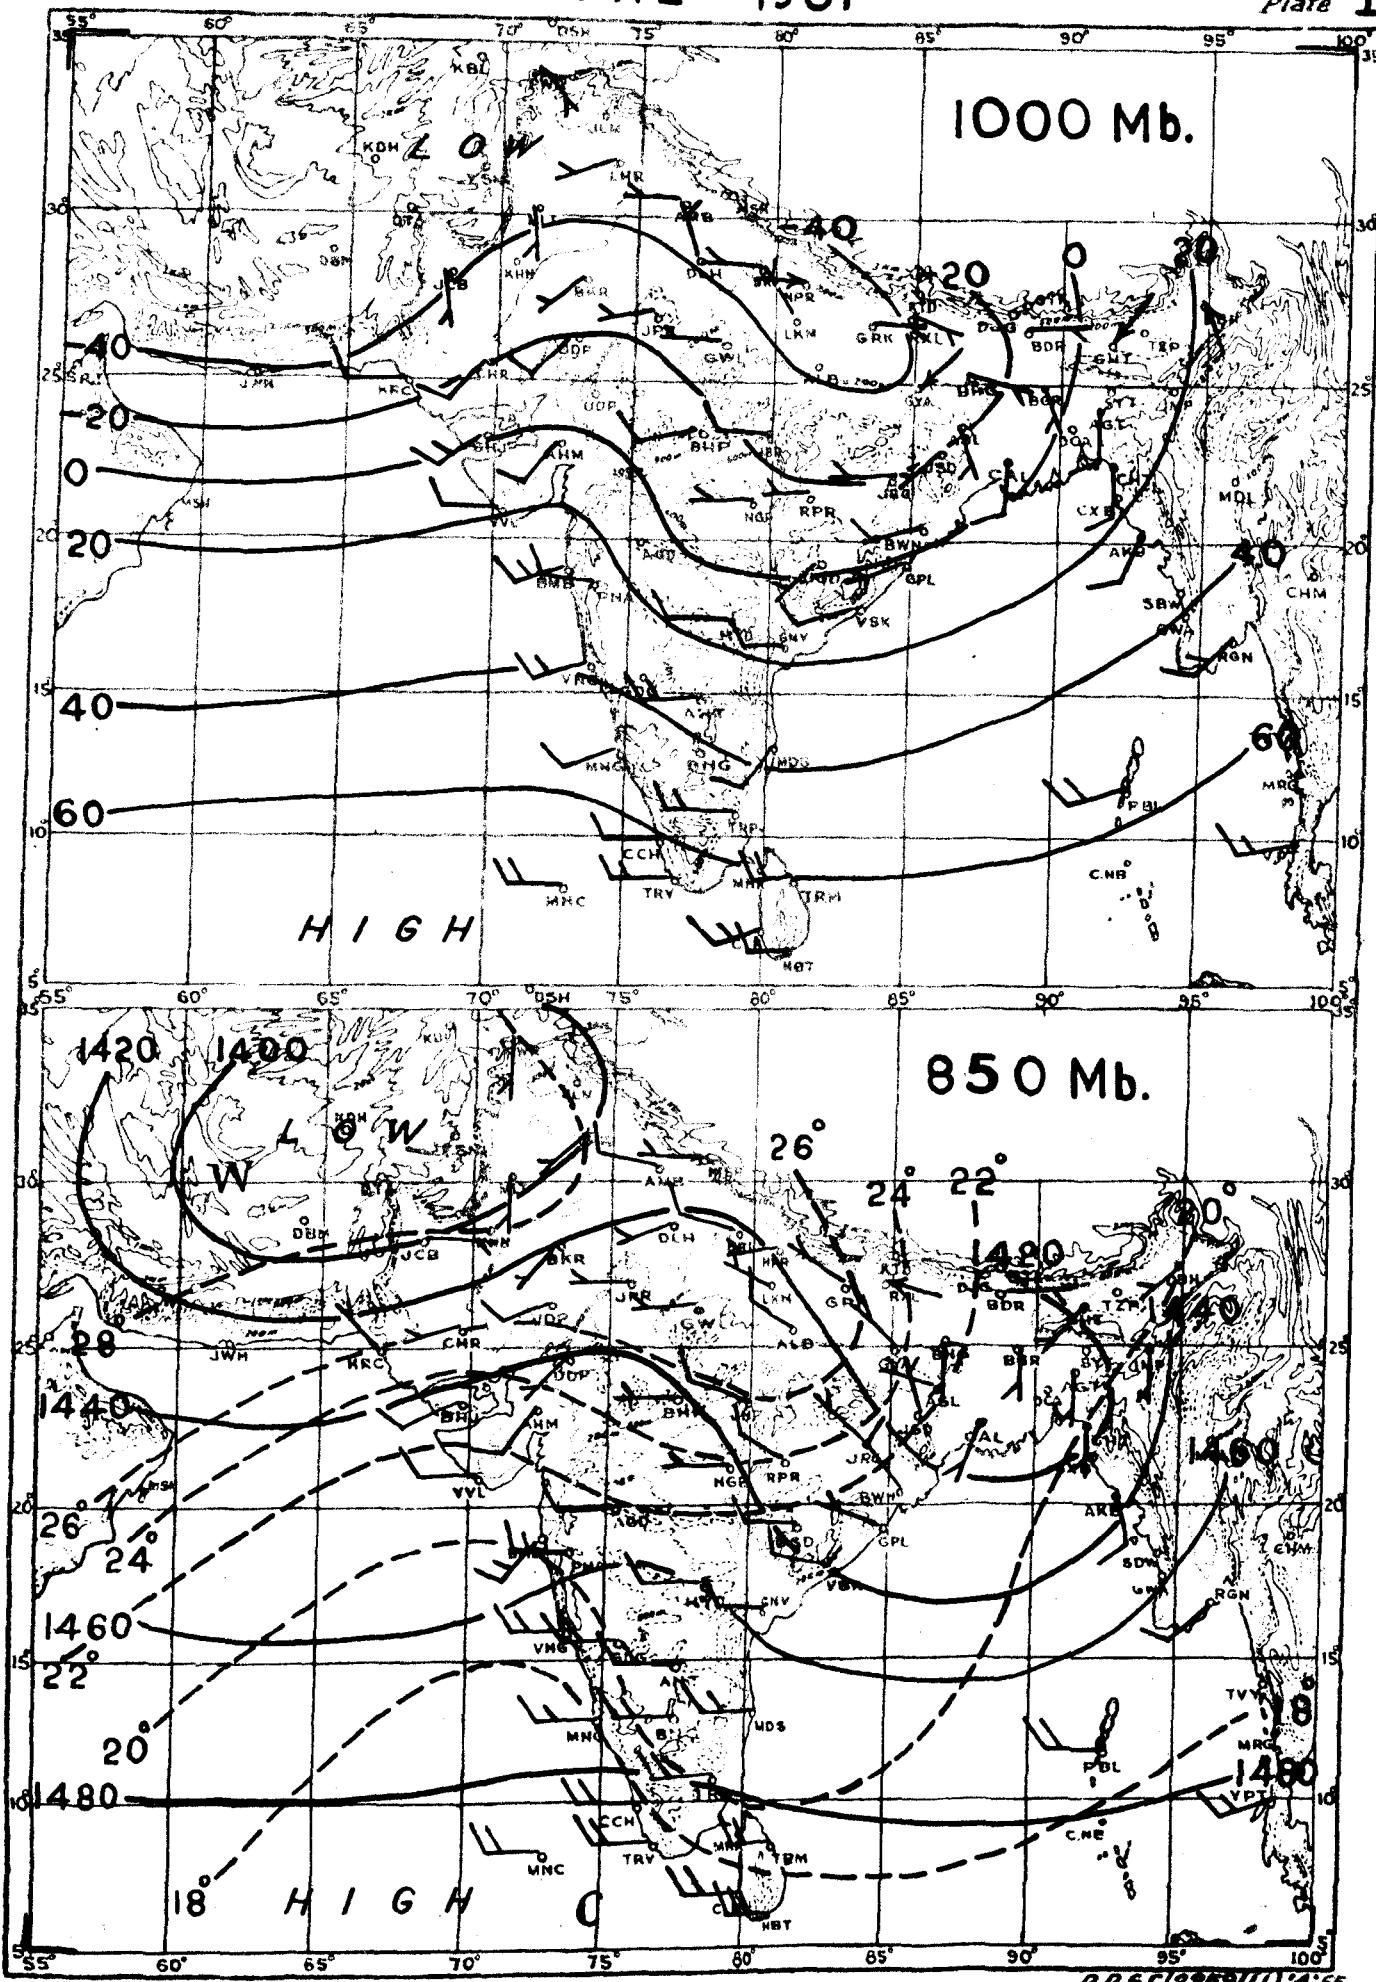

Means are not worked out for less than five observations at standard pressure surfaces.

INDIA WEATHER REVIEW, 1961

Monthly Weather Report JULY

Published by authority of the Government of India

Chief features—

(1) Movement of a series of low pressure systems from head Bay of Bengal to Gujarat and South Rajasthan; and

(2) Persistence of active monsoon conditions along the west coast and in the north Peninsula, leading to severe floods in the States of Kerala, Madras, Mysore, Maharashtra and Orissa.

The monsoon trough remained much to the south of its normal position during the month. A depression developed over the northwest angle of the Bay of Bengal on 1st July, crossed coast near Balasore on 2nd evening, lay as a low pressure area over northwest Madhya Pradesh on 4th and became unimportant by 5th. A second depression developed over Saurashtra and Kutch on 2nd, persisted there without appreciable movement for about four days and finally weakened and merged into the seasonal low over Sind and neighbourhood by 7th. A low pressure area developed over Bihar State and neighbourhood on 9th, moved to Uttar Pradesh on 10th and merged in the monsoon trough by 12th. Another low pressure area developed over West Bengal and neighbourhood on 15th, moved in a westerly direction across the country and intensified into a depression over lower Sind and Kutch on 19th morning. It later weakened and merged into the seasonal low over Sind by 21st. One more low pressure area developed over the northwest Bay of Bengal off the Orissa coast on 19th. It moved in a westerly direction, lay over Sind on 26th and merged in the seasonal low by 28th.

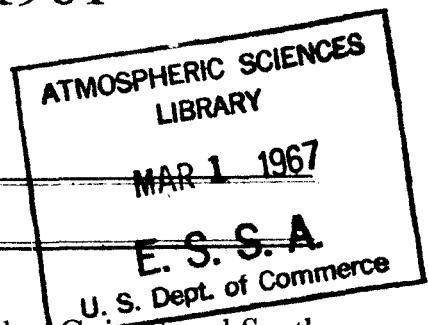

In association with this series of low pressure areas and depressions, the monsoon was generally active along the west coast and over the north Peninsula throughout the month. The monsoon activity was well marked in Kerala and south Mysore State in the first week, in the Konkan and adjoining Ghats during the first and second weeks and in Saurashtra and Kutch during the last week of the month. Mercara recorded a rainfall of 135 cm from 1st July to 6th and a total rainfall of 189 cm from 26th June to 6th July. Mahabaleshwar reported a total rainfall of 231 cm from 1st to 11th July. Some other noteworthy amounts of rainfall were : Dahanu 18 cm on 3rd July; Pendra 16 cm on 9th; Surat 24 cm on 10th and Umaria 17 cm on 16th.

In association with this persistent activity of the monsoon, severe floods occurred in the States of Kerala, Madras, Mysore, Maharashtra and Orissa. Floods of the south Peninsula were reported to be comparable with the severe floods of July 1924. Two lakh acres of land were reported to have been inundated in the State of Orissa. Due to the bursting of the two dams on Mutha river, Poona City experienced an unprecedented and devastating flood on 12th July.

A western disturbance affected the extreme northern parts of the country from 28th to 30th July. The western part of the monsoon trough which had remained very much to the south of its normal position practically throughout the month also shifted northwards to the Punjab (I) on 28th. In association with this, the monsoon remained active in parts of Uttar Pradesh and the adjoining Punjab (I) after 28th July. Kheri Lakhimpur reported 24 cm of rain, Nainital 19 cm and Mandi 14 cm on 29th. Jammu reported an exceptionally heavy fall of 34 cm on 31st. Due to the heavy rains, the river Ravi was in floods. A village named Daduwa in the Chamali border district of Uttar Pradesh was completely destroyed by a landslide and considerable loss of life occurred.

The rainfall for the month was in large excess in Saurashtra and Kutch, Madhya Maharashtra, Marathwada and Mysore State, in moderate excess in east Madhya Pradesh, Gujarat Region, the Konkan, Andhra Pradesh, the Madras State and Kerala and in slight excess in Orissa, west Uttar Pradesh and the Arabian Sea Islands. It was normal in the Bay Islands, east Uttar Pradesh, the Punjab (I), east Rajasthan, west Madhya Pradesh and Vidarbha, in slight defect in Assam, Bihar Plateau, Jammu and Kashmir and west Rajasthan, and in moderate defect elsewhere over the country outside Himachal Pradesh.

© 1961 by Manager of Publications, Government of India, Delhi-8".

The mean maximum temperature was below normal in Orissa, west Rajasthan, Madhya Maharashtra, Marathwada, coastal Andhra Pradesh, Rayalaseema, the Madras State and the Mysore State and normal over the rest of the country outside Himachal Pradesh.

The mean minimum temperature was above normal in Jammu and Kashmir, below normal in Bihar Plateau and normal over the rest of the country outside Himachal Pradesh.

The mean relative humidity in the morning was above normal in west Rajasthan, Saurashtra and Kutch, Madhya Maharashtra, Marathwada, Telangana, Rayalaseema, the Madras State and Interior Mysore State and normal over the rest of the country outside Himachal Pradesh.

The mean cloud amount in the morning was above normal in Jammu and Kashmir, Telangana, the Madras State, north Interior Mysore and the Arabian Sea Islands and normal over the rest of the country outside Himachal Pradesh.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 31 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. IST of the date noted in the succeeding column. Similarly the heaviest fall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. IST of the date given in the succeeding column.

POONA 5,

The 18th August 1961.

R. ANANTHAKRISHNAN,

for *Director General of Observatories.*
